

Cohort Combination and Classroom Sizing

In the dynamic world of educational scheduling, ensuring that classroom sizes are optimized for the number of students attending is crucial. Wise Timetable offers two key features to help with this: automatic calculation and manual adjustment.

Automatic Calculation

When multiple student groups (cohorts) are assigned to a class, Wise Timetable automatically sums the total number of students and finds a classroom that fits. This feature ensures that the allocated space is appropriate for the combined group size, preventing overcrowding and ensuring a comfortable learning environment.

Manual Adjustment

Sometimes, the actual number of students attending a class may be lower than the total number assigned. For instance, if only a subset of students is enrolled in a specific module, you can manually reduce the expected number of attendees in Wise Timetable. This manual adjustment helps avoid unnecessarily large room assignments, ensuring that space is used efficiently.

Why This Matters

- **Optimized Space Usage:** By preventing the overbooking of large rooms for small groups, Wise Timetable ensures that classroom space is used effectively.
- **Accurate Scheduling:** Ensuring that room capacity matches real attendance helps in creating a more accurate and reliable schedule.
- **Custom Control:** Schedulers have the ability to fine-tune room assignments based on real-world knowledge, making the scheduling process more flexible and responsive to actual needs.

This is how it looks inside Wise Timetable course settings:
